NEDO human cDNA sequencing project supported by Ministry of

Economy, Trade and Industry of Japan; cDNA full insert sequencing:

Research Association for Biotechnology (RAB); cDNA library

construction: Helix Research Institute (HRI) (supported by Japan

Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,

HRI, and Biotechnology Center, National Institute of Technology and

Evaluation; clone selection for full insert sequencing: RAB and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ishibashi, T., Kanehori, K., Yosida, M., Watanabe, S., Ishida, S., Ono, Y., Hotuta, T., Hiraoka, S., Murakawa, K., Takiguchi, S., Kusano, J., Watanabe, M., Fujimori, K., Tanai, H., Ishida, M., Yamashita, H., Chiba, Y., Sugiyama, T., Irie, R., Otsuki, T., Sato, H., Wakamatsu, A., Ishii, S., Yamamoto, J., Isono, Y., Kawai-Hio, Y., Saito, K., Nishikawa, T., Kimura, K., Matsuo, K., Nakamura, Y., Sekine, M., Kikuchi, H., Kanda, K., Wagatsuma, M., Takahashi-Fujii, A., Oshima, A., Sugiyama, A., Kawakami, B., Suzuki, Y., Sugano, S., Nagahari, K., Masuho, Y., Nagai, K. and Isogai, T.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               901
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               841
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sanger Institute name: pGEM.EWSR1
Homo sapiens CDNA sequence. This sequence was generated as part of
The Wellcome Trust Sanger Institute program to isolate cDNA clones
representing the full length open reading frame of well annotated
protein coding genes on human chromosome 22. For more information

```

New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy.

'n

The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                         The present invention relates to the isolation of novel cDNA sequences completed encode human secreted proteins. The cDNA sequences have been completed from a variety of human tissues. The invention also provides a comethod for producing proteins from these polynuclectide sequences. The proteins are useful for identifying compounds that modulate their compounds that modulate expression of the polynuclectide sequences compounds that modulate expression of the polynucleotide sequences of creating diseases such as hyperproliferative disorders (e.g. cancer), commune deficiency disorders (e.g. severe combined immunodeficiency compounds that modulate expression of the invention are useful continued the secreted proteins. The sequences of the invention are useful continued disorders (e.g. severe combined immunodeficiency) commune disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis) and confectious disorders (e.g. hepatitis). The polynucleotide sequences of the invention are also useful in gene therapy. AAS62388

```
CC target (TAT) muclaic acid comprising: (a) any of 4622 nucleatide
CC sequences (see SEQ ID NO:1 to 4622); (b) the full-length coding region of
CC (a); (c) the complement of (a) or (b); (d) a sequence that has 80%
CC expence identity to (a)-(c); or (e) a sequence that hybridises to (a)-
CC (c). Also described: (l) an expression vector comprising the above
cc nucleatic acid; (2) a host cell comprising the above expression vector; (3)
CC a process for producing a polypeptide; (4) an isolated polypeptide
CC comprising: (a) an amino acid sequence encoded by any of the above
cc mucleatide sequences; (b) an amino acid sequence encoded by the full-
cC length coding region of the above nucleotide sequences; or (c) a sequence
CC having at least 80% identical to (a) or (b); (5) a chimeric polypeptide
CC comprising the above polypeptide fuels to a heterologous polypeptide; (6)
CC an isolated antibody; (a) a nisolated oligopeptide; (7) a process
CC for producing the antibody; (b) an isolated oligopeptide; (7) a process
CC the above polypeptide; (9) a tumour-associated antigenic target (7AT)
CC binding organic molecule that binds to the above polypeptide; (10) a
CC composition of matter comprising organic molecule; (10) a
CC composition of matter contained within the container; (12) methods of
CC the growth of the cell is at least in part dependent upon a growth
CC potentiating effect of the above protein; (13) a method of
CC potentiating effect of the above protein; (13) a method of
CC potentiating effect of the above protein; (13) a method of
CC potentiating effect of the above protein; (13) a method of
CC potentiating the protein in a sample suspected of containing the protein
CC described above; (15) methods of diagnosing the presence of a tumour in a
CC described above; (15) methods of binding an antibody, oligopeptide or
CC protein; and (17) a method of binding an antibody, oligopeptide or
CC protein; and (17) a method of binding an antibody, oligopeptide or
CC protein; are composition of methods of the above
CC prot
New nucleic acid molecule and encoded polypeptide, for diagnosing, preventing or treating cell proliferative disorders such as cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; SEQ ID NO 2904; 5504pp; English.

feminisation.
```

This invention relates to a novel modulators that alter the interaction CC between the Ewing sarcoma protein (EWS) and its nuclear receptor, as well CC as the screening method thereof. Specifically, it refers to determining CC and identifying a hormonal effect brought about by test compounds that CC modulate either the binding of EWS to the nuclear receptor or the ligand-CC induced activity of this receptor. The present invention describes the nuclear receptors as including oestrogen, progesterone, thyroid hormone, CC vitamin D, and retinoic acid receptors, most preferably they are androgen CC receptors. Accordingly, these modulators may be used in the development CC diseases associated with receptor dysfunction such as prostatic cancer, alopecia, acne, hypogonadism and androgen-resistance syndrome e.g. CC test.cular feminisation. This method provides reliable, sensitive, CC simple, inexpensive and ragid assessment of the hormonal effects of these CC test compounds. This polynucleotide sequence is the cDNA encoding the human Ewing sarcoma protein of the invention.

The invention relates to isolated polynucleotide (I) and polypeptide (II) gequences. (I) is useful as hybridisation probes, polymerase chain (C) and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed complete in the sequence tags for identifying expressed complete in the sequence tags for identifying expressed complete in the sequence tags for identifying expressed complete. (II) is useful in gene therapy techniques to restore normal complete in the sequence against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food complete in tissue, as molecular weight markers and as a food complete in the binding partners are useful in medical imaging of sites expressing (II). (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The complete and polymucleotide sequences have applications in complete and polymucleotide sequences have applications in the product of the invention of mutations and complete complete content types of data and products dependent on DNA and complete in the product of the sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the print of the print of the printer of the pri Claim 1; SEQ ID NO 6451; 103pp; English. biodiversity

                                                                                              Detecting granulocyte activation by detecting genes associated with granulocyte activation, markers that is useful for monitoring disease
The invention relates to detecting (M1) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identification chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where

```
CC differential expression of Gs is indicative of GCA. Also included are CC modulating (M2) GA by contacting GC with an agent that alters the CC expression of at least one gene in Gs; (2) screening (M3) for an agent CC tissue, an allergic response in a subject, exposure of a subject to a CC pathogen or sterile inflammatory disease using the gene expression CC pathogen or sterile inflammatory disease using the gene expression CC pathogen or sterile inflammatory disease, by detecting the level of CC expression of the gene is indicative of inflammation; (4) treating CC (M5) an inflammation (especially chronic) in a CC inflammatory disease, by contacting a tissue of gene (B) from Gs, where the level of expression in a subject, exposure of a subject to a gent that modulates the expression of gene (B) from Gs in the tissue. M1 CC is useful for detecting GCA; M2 is useful for modulating of a subject to a pathogen or sterile inflammation in a tissue, M4 is useful for detecting GA; M3 is useful for detecting an agent capable of modulating GCA preferably in an CC (especially chronic) in a tissue, an allergic response in a subject to a pathogen or sterile inflammation with an CC (especially chronic) in a tissue, an allergic response in a subject to a pathogen or sterile inflammation with an CC (especially chronic) in a tissue, an allergic response in a subject to apathogen or sterile inflammatory disease (e.g. cardiac reperfusion injury, renal reperfusion injury, asthma, thrombosis, CC disease, ulcerative colitis, periodontal disease; also bacterial CC infection, vital infection, parasitic infection, protozoal infection, conditions. The present sequence repersents a gene differentially conditions. The present sequence repersents a gene differentially conditions of the printed specification, but was obtained in the printed specification.

CC or identifying an agent that modulates the onset or progression of BPH.

CC The method is based on changes in gene expression in BPH tissue isolated

CC from patients exhibiting different clinical states of prostate

CC detecting the expression levels of one or more genes in prostate cells

CC from the subject that are differentially regulated compared to normal

CC prostate cells. (II) comprises preparing a first gene expression profile

CC of BPH cells or BPH-like cell population, exposing the cells to the

CC agent, preparing a second gene expression profile of the agent exposed

CC cells, and comparing the first and second gene expression profiles. (I)

CC is useful for diagnosing the onset or progression of BPH. (II) is useful

CC for identifying an agent that modulates the onset or progression of BPH.

CC or methods are useful to present information identifying the expression

CC expression of gene in the tissue or cells to the level of genes

CC expression level in BPH. Agents using (II) are useful for treating BPH or

CC prostate cancer. ABK64106-ABK64860 represent human benign prostatic

CC hyperplasia gene sequences of the invention

The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatotropic, and cyvostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug toxicity, drug efficacy and drug metabolism. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                    Diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumor in a patient, involves detecting the level of expression of two or more genes in a liver tissue sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gene; liver cancer; ds; hepatocellular carcinoma; hepatotropic; metastatic liver tumour; cytostatic; expression profile; disease state; disease progression; drug toxicity; drug efficacy; drug metabolism.
                                                                                                                                                                                                                                                                                                                                                                              Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gene #3772 used to diagnose liver cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ABN97274;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ABN97274
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           02-OCT-2000; 2000US-0237054P

                                                                              cc mammals. The invention also relates to nucleic acid and polypeptides comprising at least 80% identical to the TAT nucleic acids and polypeptides; expression vectors and host cells comprising a TAT nucleic cc acid; an antibody specific for a TAT polypeptide; applied or organic cc molecule which binds to a TAT polypeptide; applied or organic cc TAT polypeptide; and methods and compositions for the treatment or cd diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, cc antibodies, antagonists, binding molecules and compositions are useful cf or diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cc cancer, pancreatic cancer, cervical cancer, cancers of the central cc cancer, pancreatic cancer, cervical cancer, cancers of the central cc cancer, pancreatic and lung cancer and gene mapping, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence crepresents a TAT nucleic acid of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CDNA clones obtained by an oligo-capping method, where none of these clones are identical to any known human mRNAs. The present invention describes an immunoassay to identify agonists and antagonists, as well as antibodies, antisense molecules and siRNAs that can all be used to bind to and modulate expression of the cDNA molecules. As such, these molecules are useful for diagnostic markers or therapeutic targets for the various diseases or morbid states. In particular, they are useful in gene therapy for treating osteoporosis, neurological disease, Alzheimer's disease, Parkinson's disease, dementia, short memory and various cancers, as well as for maintaining equilibrium of sense or motor function, and for treating emotional reaction, fear response and panic. Accordingly, they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian, cytostatic and tranquiliser activities. This polynucleotide is a full length human cDNA sequence of the invention. MOTE: This sequence is not given in the sequence listing of the specification but can be obtained on CD-ROM from the Buropean Patent Office, Vienna Sub-office.

                                                                                                                                                                                                                                                           The present invention describes an isolated PRO nucleic acid (1). Also Cd described: (1) a vector comprising (1), (2) a host cell comprising the vector of (1); (3) a process for producing a PRO polypeptides; (4) an isolated PRO polypeptide; (5) a chimeric molecule comprising the CC isolated PRO polypeptide; (5) a chimeric molecule comprising the CC polypeptide of (4) fused to a heterologous amino acid sequence; (6) an antibody which specifically binds to a polypeptide of (4); (7) a CC composition of matter comprising a polypeptide of (4), an agonist or CC entragonist of the polypeptide or an antibody that binds to the CC comprising a container, a label on the container and a composition of CC matter of (7); (9) a method of treating an immune related disease in a mammal; (10) a method for determining the presence of a PRO polypeptide CC diagnosing an immune related disease or an inflammatory immune response in mammal; (12) a method of identifying a compound that inhibits or CC mimics the activity of or expression of a gene encoding a PRO polypeptide in mammal; (12) a method of stimulating the immune response in a mammal. The PRO sequences have antiallergic, antianaemic, antiarthritic, antiasthmatic, antithyroid, CNS, dermatological, gastrointestinal, CC antirisementic, antithyroid, CNS, dermatological, gastrointestinal, candidabetic, antithyroid, CNS, dermatological, gastrointestinal, candidabetic, antianaemic, antisprotacic, and conductive, osceopastic, respiratory, vasotropic and curvucide activities, and can be used in gene therapy. The nucleic acid (1) and the encoded polypeptides, compositions, kits and methods are useful in diagnosing and treating an immune related disease and in CC entitulating an immune response. The present sequence represents a human cCC entities and methods are the present sequence and in the encodence from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC The invention relates to human tumour-associated antigenic target (TAT) CC polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in C mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and comprising a TAT nucleic acids and polypeptide or organic molecule which binds to a TAT polypeptide; fission proteins comprising a CC malecule which binds to a TAT polypeptide; fission proteins comprising a CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, liver cancer, bladder carcous system, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in CC chromosome identification and in gene therapy. The present sequence

The present invention relates to the isolation of novel cDNA sequences which encode human secreted proteins. The cDNA sequences have been concentrated from a variety of human tissues. The invention also provides a comethod for producing proteins from these polymucleotide sequences. The groteins are useful for identifying compounds that modulate their compounds that modulate expression of the polymucleotide sequences of compounds that modulate expression of the polymucleotide sequences compounds that modulate expression of the polymucleotide sequences of the invention are useful for treating diseases such as hyperproliferative disorders (e.g. cancer), immune deficiency disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis) and confectious disorders (e.g. hepatitis). The polymucleotide sequences of the invention are also useful in gene therapy. AASS2214-AASS2338

English.

The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia by measuring expression levels of particular genes (ABI99202 to ABI99912, encoding the the

protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic diseases. ABI99913 and ABI99914 represent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Local Similarity 91.7

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
